

# List of Examples

---

2.1	Stoichiometric matrix for a single reaction . . . . .	30
2.2	Columns of $\mathbf{v}$ . . . . .	30
2.3	Rows of $\mathbf{v}$ . . . . .	31
2.4	Stoichiometric matrix for CVD chemistry . . . . .	33
2.5	Conservation of mass . . . . .	34
2.6	More species than reactions . . . . .	37
2.7	Maximal set of reactions for methane oxidation . . . . .	39
2.8	Production rate for SiH <sub>2</sub> . . . . .	45
3.1	Ideal-gas equilibrium . . . . .	66
3.2	Ideal-gas equilibrium, revisited . . . . .	68
3.3	Minimum in $G$ for an ideal gas . . . . .	73
3.4	Chemical and phase equilibrium for a nonideal mixture . . . . .	82
3.5	Equilibrium composition for multiple reactions . . . . .	90
3.6	Multiple reactions with optimization . . . . .	93
4.1	Reaching steady state in a CSTR . . . . .	130
4.2	Phenol production in a CSTR . . . . .	131
4.3	Semi-batch polymerization . . . . .	141
4.4	Changing flowrate in a PFR . . . . .	149
4.5	Benzene pyrolysis in a PFR . . . . .	152
4.6	Benzene pyrolysis, revisited . . . . .	155
4.7	Ethane pyrolysis in the presence of NO . . . . .	156
4.8	The PFR versus CSTR with separation . . . . .	161
4.9	Stochastic vs. deterministic simulation of a virus model . . . . .	170
5.1	Computing a rate constant . . . . .	205
5.2	Production rate of acetone . . . . .	226
5.3	Production rate of oxygen . . . . .	228
5.4	Free-radical polymerization kinetics . . . . .	230
5.5	Ethane pyrolysis . . . . .	232
5.6	Fitting Langmuir adsorption constants to CO data . . . . .	244
5.7	Equilibrium CO and O surface concentrations . . . . .	249
5.8	Production rate of CO <sub>2</sub> . . . . .	250
5.9	Production rate of methane . . . . .	253

6.1	Constant-pressure versus constant-volume reactors . . . . .	281
6.2	Liquid-phase batch reactor . . . . .	283
6.3	Temperature control in a CSTR . . . . .	287
6.4	PFR and interstage cooling . . . . .	319
6.5	Oxidation of o-xylene to phthalic anhydride . . . . .	323
6.6	Ammonia synthesis . . . . .	327
7.1	Using the Thiele modulus and effectiveness factor . . . . .	371
7.2	Catalytic converter . . . . .	397
7.3	First-order, isothermal fixed-bed reactor . . . . .	403
7.4	Mass-transfer limitations in a fixed-bed reactor . . . . .	405
7.5	Second-order, isothermal fixed-bed reactor . . . . .	406
7.6	Hougen-Watson kinetics in a fixed-bed reactor . . . . .	409
7.7	Multiple-reaction, nonisothermal fixed-bed reactor . . . . .	412
8.1	Transient start-up of a PFR . . . . .	450
8.2	Order matters . . . . .	451
8.3	Two CSTRs in series . . . . .	461
8.4	Optimal is neither segregated nor maximally mixed . . . . .	474
8.5	Mixing two liquid-phase streams in a stirred tank . . . . .	479
8.6	Maximizing yield in dispersed plug flow . . . . .	484
9.1	Estimating the rate constant and activation energy . . . . .	519
9.2	Unknown measurement variance and few data points . . . . .	525
9.3	Fitting single and multiple adsorption experiments . . . . .	529
9.4	Fitting reaction-rate constant and order . . . . .	541
9.5	Fitting rate constants in hepatitis B virus model . . . . .	545
A.1	Estimating reaction rates . . . . .	577
A.2	Two simple sensitivity calculations . . . . .	586
A.3	Single-pellet profile . . . . .	590
A.4	A simple fixed-bed reactor problem . . . . .	592
