

Contents

1	Setting the Stage	1
1.1	Introduction	1
1.2	Some Classifications and Terminology	2
1.3	Scale	7
1.4	Some Examples	10
1.4.1	Chemical Vapor Deposition	10
1.4.2	Hydrodesulfurization	12
1.4.3	Olefin Polymerization	15
1.4.4	Hepatitis B Virus Modeling	18
1.5	An Overview of the Text	20
2	The Stoichiometry of Reactions	27
2.1	Introduction	27
2.2	Chemical Reactions and Stoichiometry	28
2.3	Independent Reactions	35
2.4	Reaction Rates and Production Rates	41
2.5	Computational Aspects of Stoichiometry	46
2.5.1	Computing Production Rates from Reaction Rates	47
2.5.2	Computing Reaction Rates from Production Rates	48
2.5.3	Measurement Errors and Least-Squares Estimation	49
2.6	Summary and Notation	53
2.7	Exercises	55
3	Review of Chemical Equilibrium	63
3.1	Introduction	63
3.2	Condition for Reaction Equilibrium	64
3.2.1	Evaluation of the Gibbs Energy Change of Reaction	75
3.2.2	Temperature Dependence of the Gibbs Energy . . .	76
3.3	Condition for Phase Equilibrium	79
3.3.1	Ideal Mixtures	80
3.3.2	Nonideal Mixtures	82
3.4	Heterogeneous Reactions	82
3.5	Multiple Reactions	88
3.5.1	Algebraic Approach	88
3.5.2	Optimization Approach	92

3.6	Summary and Notation	94
3.7	Exercises	98
4	The Material Balance for Chemical Reactors	111
4.1	General Mole Balance	111
4.2	The Batch Reactor	112
4.2.1	Analytical Solutions for Simple Rate Laws	113
4.3	The Continuous-Stirred-Tank Reactor (CSTR)	129
4.4	The Semi-Batch Reactor	133
4.5	Volume Change Upon Reaction	133
4.6	The Plug-Flow Reactor (PFR)	146
4.6.1	Thin Disk Volume Element	146
4.6.2	Steady-State Operation	147
4.6.3	Volumetric Flowrate for Gas-Phase Reactions	147
4.6.4	Volumetric Flowrate for Liquid-Phase Reactions	148
4.6.5	Single Reaction Systems	149
4.6.6	Multiple-Reaction Systems	151
4.7	Some PFR-CSTR Comparisons	159
4.8	Stochastic Simulation of Chemical Reactions	164
4.9	Summary and Notation	173
4.10	Exercises	176
5	Chemical Kinetics	189
5.1	Introduction	189
5.2	Elementary Reaction	190
5.3	Elementary Reaction Kinetics	195
5.4	Fast and Slow Time Scales	207
5.4.1	The Reaction Equilibrium Assumption	209
5.4.2	The Quasi-Steady-State Assumption	218
5.5	Rate Expressions	226
5.6	Reactions at Surfaces	237
5.7	Summary and Notation	255
5.8	Exercises	257
6	The Energy Balance for Chemical Reactors	275
6.1	General Energy Balance	275
6.1.1	Work Term	276
6.1.2	Energy Terms	277
6.2	The Batch Reactor	277
6.3	The CSTR	286
6.3.1	Steady-State Multiplicity	290

6.3.2	Stability of the Steady State	295
6.3.3	Sustained Oscillations, Limit Cycles	305
6.4	The Semi-Batch Reactor	316
6.5	The Plug-Flow Reactor	317
6.5.1	Plug-Flow Reactor Hot Spot and Runaway	322
6.5.2	The Autothermal Plug-Flow Reactor	326
6.6	Summary and Notation	332
6.7	Exercises	338
7	Fixed-Bed Catalytic Reactors	355
7.1	Introduction	355
7.2	Catalyst Properties	357
7.2.1	Effective Diffusivity	360
7.3	The General Balances in the Catalyst Particle	363
7.4	Single Reaction in an Isothermal Particle	365
7.4.1	First-Order Reaction in a Spherical Particle	366
7.4.2	Other Catalyst Shapes: Cylinders and Slabs	374
7.4.3	Other Reaction Orders	377
7.4.4	Hougen-Watson Kinetics	380
7.4.5	External Mass Transfer	385
7.4.6	Observed versus Intrinsic Kinetic Parameters	390
7.5	Nonisothermal Particle Considerations	392
7.6	Multiple Reactions	395
7.7	Fixed-Bed Reactor Design	400
7.7.1	Coupling the Catalyst and Fluid	400
7.8	Summary and Notation	416
7.9	Exercises	419
8	Mixing in Chemical Reactors	433
8.1	Introduction	433
8.2	Residence-Time Distribution	434
8.2.1	Definition	434
8.2.2	Measuring the RTD	435
8.2.3	Continuous-Stirred-Tank Reactor (CSTR)	439
8.2.4	Plug-Flow Reactor (PFR) and Batch Reactor	442
8.2.5	CSTRs in Series	444
8.2.6	Dispersed Plug Flow	446
8.3	Limits of Reactor Mixing	454
8.3.1	Complete Segregation	455
8.3.2	Maximum Mixedness	458
8.3.3	Mass Transfer and Limits of Reactor Mixing	464

8.4	Limits of Reactor Performance	469
8.4.1	A Single Convex (Concave) Reaction Rate	469
8.4.2	The General Case	474
8.5	Examples in Which Mixing is Critical	479
8.6	Summary and Notation	486
8.7	Exercises	490
9	Parameter Estimation for Reactor Models	501
9.1	Experimental Methods	501
9.1.1	Analytical Probes for Concentration	501
9.1.2	Experimental Reactors for Kinetics Studies	506
9.1.3	Characterizing Catalysts and Surfaces	510
9.2	Data Modeling and Analysis	513
9.2.1	Review of the Normal Distribution	514
9.2.2	Eigenvalues and Eigenvectors	515
9.2.3	Least-Squares Estimation	517
9.2.4	Least Squares with Unknown Variance	523
9.2.5	Nonlinear Least Squares	527
9.2.6	Design of Experiments	532
9.2.7	Parameter Estimation with Differential Equation Models	538
9.3	An Industrial Case Study	551
9.4	Summary and Notation	562
9.5	Exercises	565
A	Computational Methods	575
A.1	Linear Algebra and Least Squares	575
A.2	Nonlinear Algebraic Equations and Optimization	578
A.2.1	Defining Functions (<code>function</code>)	578
A.2.2	Solving Nonlinear Algebraic Equations (<code>fsolve</code>)	579
A.2.3	Solving Nonlinear Optimization Problems (<code>npsol</code>)	580
A.3	Differential Equations (<code>lsode</code>)	582
A.3.1	Differential-Algebraic Equations (<code>dassl</code>)	584
A.3.2	Automatic Stopping Times (<code>ddasrt</code>)	584
A.4	Sensitivities of Differential Equations (<code>ddasac</code>)	585
A.5	Boundary-Value Problems and Collocation (<code>colloc</code>)	589
A.6	Exercises	595
