

List of Examples and Statements

1.1	Example: Sum of quadratic functions	15
1.2	Lemma: Hautus lemma for controllability	24
1.3	Lemma: LQR convergence	24
1.4	Lemma: Hautus lemma for observability	42
1.5	Lemma: Convergence of estimator cost	43
1.6	Lemma: Estimator convergence	44
1.7	Assumption: Target feasibility and uniqueness	48
1.8	Lemma: Detectability of the augmented system	50
1.9	Corollary: Dimension of the disturbance	50
1.10	Lemma: Offset-free control	52
1.11	Example: More measured outputs than inputs and zero offset	53
1.12	Lemma: Hautus lemma for stabilizability	68
1.13	Lemma: Hautus lemma for detectability	72
1.14	Lemma: Stabilizable systems and feasible targets	83
2.1	Proposition: Continuity of system solution	94
2.2	Assumption: Continuity of system and cost	97
2.3	Assumption: Properties of constraint sets	98
2.4	Proposition: Existence of solution to optimal control problem	98
2.5	Example: Linear quadratic MPC	99
2.6	Example: Closer inspection of linear quadratic MPC	101
2.7	Theorem: Continuity of value function and control law	104
2.8	Example: Discontinuous MPC control law	105
2.9	Definition: Positive and control invariant sets	109
2.10	Proposition: Existence of solutions to DP recursion	110
2.11	Definition: Asymptotically stable and GAS	112
2.12	Definition: Lyapunov function	113
2.13	Theorem: Lyapunov stability theorem	113
2.14	Assumption: Basic stability assumption	114
2.15	Proposition: The value function $V_N^0(\cdot)$ is locally bounded	115
2.16	Proposition: Extension of upper bound to \mathcal{X}_N	115
2.17	Assumption: Weak controllability	116
2.18	Proposition: Monotonicity of the value function	118
2.19	Theorem: Asymptotic stability of the origin	119

2.20	Definition: Exponential stability	120
2.21	Theorem: Lyapunov function and exponential stability . .	120
2.22	Definition: Input/output-to-state stable (IOSS)	121
2.23	Assumption: Modified basic stability assumption	121
2.24	Theorem: Asymptotic stability with stage cost $\ell(y, u)$. . .	122
2.25	Assumption: Continuity of system and cost; time-varying case	124
2.26	Assumption: Properties of constraint sets; time-varying case	124
2.27	Definition: Sequential positive invariance and sequential control invariance	124
2.28	Proposition: Continuous system solution; time-varying case	125
2.29	Proposition: Existence of solution to optimal control prob- lem; time-varying case	125
2.30	Definition: Asymptotically stable and GAS for time-varying systems	125
2.31	Definition: Lyapunov function: time-varying, constrained case	126
2.32	Theorem: Lyapunov theorem for asymptotic stability (time- varying, constrained)	126
2.33	Assumption: Basic stability assumption; time-varying case	126
2.34	Proposition: Optimal cost decrease; time-varying case . . .	127
2.35	Proposition: MPC cost is less than terminal cost	127
2.36	Proposition: Optimal value function properties; time-varying case	127
2.37	Assumption: Uniform weak controllability	127
2.38	Proposition: Conditions for uniform weak controllability .	128
2.39	Theorem: Asymptotic stability of the origin: time-varying MPC	130
2.40	Lemma: Entering the terminal region	145
2.41	Theorem: MPC stability; no terminal constraint	146
2.42	Proposition: Admissible warm start in \mathcal{X}_f	149
2.43	Algorithm: Suboptimal MPC	149
2.44	Proposition: Linking warm start and state	150
2.45	Definition: Asymptotic stability (difference inclusion) . . .	150
2.46	Definition: Lyapunov function (difference inclusion)	151
2.47	Proposition: Asymptotic stability (difference inclusion) . .	151
2.48	Theorem: Asymptotic stability of suboptimal MPC	151
2.49	Assumption: Continuity of system and cost	154
2.50	Assumption: Properties of constraint sets	154
2.51	Assumption: Cost lower bound	154

2.52	Proposition: Asymptotic average performance	155
2.53	Definition: Dissipativity	156
2.54	Assumption: Continuity at the steady state	157
2.55	Assumption: Strict dissipativity	157
2.56	Theorem: Asymptotic stability of economic MPC	157
2.57	Example: Economic MPC versus tracking MPC	158
2.58	Example: MPC with mixed continuous/discrete actuators .	162
2.59	Theorem: Lyapunov theorem for asymptotic stability . . .	177
2.60	Proposition: Convergence of state under IOSS	178
2.61	Lemma: An equality for quadratic functions	178
2.62	Lemma: Evolution in a compact set	179
3.1	Definition: Robust global asymptotic stability	207
3.2	Theorem: Lyapunov function and RGAS	208
3.3	Theorem: Robust global asymptotic stability and regular- ization	209
3.4	Proposition: Bound for continuous functions	211
3.5	Proposition: Robustness of nominal MPC	214
3.6	Definition: Robust control invariance	217
3.7	Definition: Robust positive invariance	217
3.8	Assumption: Basic stability assumption; robust case	218
3.9	Theorem: Recursive feasibility of control policies	218
3.10	Definition: Set algebra and Hausdorff distance	224
3.11	Definition: Robust asymptotic stability of a set	230
3.12	Proposition: Robust asymptotic stability of tube-based MPC for linear systems	230
3.13	Example: Calculation of tightened constraints	231
3.14	Proposition: Recursive feasibility of tube-based MPC	235
3.15	Proposition: Robust exponential stability of improved tube- based MPC	235
3.16	Proposition: Implicit satisfaction of terminal constraint . .	239
3.17	Proposition: Properties of the value function	240
3.18	Proposition: Neighborhoods of the uncertain system	241
3.19	Proposition: Robust positive invariance of tube-based MPC for nonlinear systems	241
3.20	Example: Robust control of an exothermic reaction	243
3.21	Assumption: Feasibility of robust control	251
3.22	Assumption: Robust terminal set condition	252
3.23	Example: Constraint tightening via sampling	254

4.1	Definition: i-IOSS	272
4.2	Proposition: Convergence of state under i-IOSS	272
4.3	Definition: β -convergent sequence	272
4.4	Proposition: Bounded, convergent sequences are β -convergent	272
4.5	Proposition: Bound for sum cost of convergent sequence.	273
4.6	Assumption: β -convergent disturbances	273
4.7	Assumption: Positive definite stage cost	273
4.8	Definition: Robustly globally asymptotically stable estimation	274
4.9	Proposition: Boundedness and convergence of estimate error	274
4.10	Theorem: FIE with β -convergent disturbances is RGAS	277
4.11	Lemma: Duality of controllability and observability	282
4.12	Theorem: Riccati iteration and regulator stability	282
4.13	Definition: Observability	284
4.14	Definition: Final-state observability	285
4.15	Definition: Globally \mathcal{K} -continuous	285
4.16	Proposition: Observable and global \mathcal{K} -continuous imply FSO	285
4.17	Definition: RGAS estimation (observable case)	285
4.18	Theorem: MHE is RGAS (observable case) with zero prior weighting	286
4.19	Definition: Full information arrival cost	287
4.20	Lemma: MHE and FIE equivalence	287
4.21	Definition: MHE arrival cost	288
4.22	Assumption: Prior weighting	288
4.23	Proposition: Arrival cost of full information greater than MHE	289
4.24	Definition: MHE-detectable system	290
4.25	Theorem: MHE is RGAS	290
4.26	Assumption: Estimator constraint sets	294
4.27	Theorem: Constrained full information is RGAS	295
4.28	Theorem: Constrained MHE is RGAS	295
4.29	Assumption: Prior weighting for linear system	296
4.30	Assumption: Polyhedral constraint sets	296
4.31	Corollary: Constrained MHE is RGAS	296
4.32	Example: Filtering and smoothing updates	299
4.33	Definition: i-IOSS (max form)	301
4.34	Assumption: Positive definite cost function	302
4.35	Assumption: Lipschitz continuity of stage-cost bound compositions	302
4.36	Assumption: Uniform i-IOSS contractivity	302

4.37	Proposition: Locally Lipschitz upper bound	302
4.38	Proposition: The nameless lemma	303
4.39	Theorem: MHE is RAS	304
4.40	Example: MHE of linear time-invariant system	306
4.41	Example: EKF, UKF, and MHE performance comparison . .	313
4.42	Definition: i-UIOSS	319
4.43	Assumption: Bounded estimate error	319
4.44	Definition: Robust positive invariance	320
4.45	Definition: Robust asymptotic stability	320
4.46	Definition: ISS Lyapunov function	320
4.47	Proposition: ISS Lyapunov stability theorem	320
4.48	Theorem: Combined MHE/MPC is RAS	322
4.49	Example: Combined MHE/MPC	323
5.1	Definition: Positive invariance; robust positive invariance .	345
5.2	Proposition: Proximity of state and state estimate	345
5.3	Proposition: Proximity of state estimate and nominal state	347
5.4	Assumption: Constraint bounds	348
5.5	Algorithm: Robust control algorithm (linear constrained systems)	350
5.6	Proposition: Exponential stability of output MPC	351
5.7	Algorithm: Robust control algorithm (offset-free MPC) . . .	359
6.1	Algorithm: Suboptimal MPC (simplified)	375
6.2	Definition: Lyapunov stability	376
6.3	Definition: Uniform Lyapunov stability	377
6.4	Definition: Exponential stability	377
6.5	Lemma: Exponential stability of suboptimal MPC	378
6.6	Lemma: Global asymptotic stability and exponential convergence with mixed powers of norm	379
6.7	Lemma: Converse theorem for exponential stability	380
6.8	Assumption: Unconstrained two-player game	386
6.9	Example: Nash equilibrium is unstable	389
6.10	Example: Nash equilibrium is stable but closed loop is unstable	390
6.11	Example: Nash equilibrium is stable and the closed loop is stable	391
6.12	Example: Stability and offset in the distributed target calculation	401
6.13	Assumption: Constrained two-player game	407

6.14	Lemma: Global asymptotic stability and exponential convergence of perturbed system	414
6.15	Assumption: Disturbance models	415
6.16	Lemma: Detectability of distributed disturbance model	415
6.17	Assumption: Constrained M -player game	420
6.18	Lemma: Distributed gradient algorithm properties	424
6.19	Assumption: Basic stability assumption (distributed)	426
6.20	Proposition: Terminal constraint satisfaction	427
6.21	Theorem: Asymptotic stability	429
6.22	Example: Nonlinear distributed control	429
6.23	Lemma: Local detectability	443
7.1	Definition: Polytopic (polyhedral) partition	456
7.2	Definition: Piecewise affine function	456
7.3	Assumption: Strict convexity	457
7.4	Definition: Polar cone	459
7.5	Proposition: Farkas's lemma	459
7.6	Proposition: Optimality conditions for convex set	459
7.7	Proposition: Optimality conditions in terms of polar cone	461
7.8	Proposition: Optimality conditions for linear inequalities	461
7.9	Proposition: Solution of $\mathbb{P}(w)$, $w \in R_x^0$	463
7.10	Proposition: Piecewise quadratic (affine) cost (solution)	464
7.11	Example: Parametric QP	464
7.12	Example: Explicit optimal control	465
7.13	Proposition: Continuity of cost and solution	467
7.14	Assumption: Continuous, piecewise quadratic function	470
7.15	Definition: Active polytope (polyhedron)	471
7.16	Proposition: Solving \mathbb{P} using \mathbb{P}_i	471
7.17	Proposition: Optimality of $u_x^0(w)$ in R_x	474
7.18	Proposition: Piecewise quadratic (affine) solution	474
7.19	Proposition: Optimality conditions for parametric LP	478
7.20	Proposition: Solution of \mathbb{P}	481
7.21	Proposition: Piecewise affine cost and solution	481
8.1	Example: Nonlinear MPC	495
8.2	Example: Sequential approach	498
8.3	Example: Integration methods of different order	504
8.4	Example: Implicit integrators for a stiff ODE system	511
8.5	Example: Finding a fifth root with Newton-type iterations	516
8.6	Example: Convergence rates	517

8.7	Theorem: Local contraction for Newton-type methods . . .	518
8.8	Corollary: Convergence of exact Newton's method	519
8.9	Example: Function evaluation via elementary operations .	522
8.10	Example: Implicit function representation	524
8.11	Example: Forward algorithmic differentiation	526
8.12	Example: Algorithmic differentiation in reverse mode . . .	528
8.13	Example: Sequential optimal control using CasADi from Octave	534
8.14	Theorem: KKT conditions	549
8.15	Theorem: Strong second-order sufficient conditions for optimality	551
8.16	Theorem: Tangential predictor by quadratic program . . .	551
A.1	Theorem: Schur decomposition	629
A.2	Theorem: Real Schur decomposition	630
A.3	Theorem: Bolzano-Weierstrass	632
A.4	Proposition: Convergence of monotone sequences	633
A.5	Proposition: Uniform continuity	634
A.6	Proposition: Compactness of continuous functions of com- pact sets	635
A.7	Proposition: Weierstrass	636
A.8	Proposition: Derivative and partial derivative	637
A.9	Proposition: Continuous partial derivatives	638
A.10	Proposition: Chain rule	638
A.11	Proposition: Mean value theorem for vector functions . . .	638
A.12	Definition: Convex set	641
A.13	Theorem: Caratheodory	641
A.14	Theorem: Separation of convex sets	642
A.15	Theorem: Separation of convex set from zero	643
A.16	Corollary: Existence of separating hyperplane	643
A.17	Definition: Support hyperplane	644
A.18	Theorem: Convex set and halfspaces	644
A.19	Definition: Convex cone	644
A.20	Definition: Polar cone	644
A.21	Definition: Cone generator	645
A.22	Proposition: Cone and polar cone generator	645
A.23	Theorem: Convexity implies continuity	647
A.24	Theorem: Differentiability and convexity	647
A.25	Theorem: Second derivative and convexity	647
A.26	Definition: Level set	648

A.27	Definition: Sublevel set	648
A.28	Definition: Support function	648
A.29	Proposition: Set membership and support function	648
A.30	Proposition: Lipschitz continuity of support function	648
A.31	Theorem: Existence of solution to differential equations	651
A.32	Theorem: Maximal interval of existence	651
A.33	Theorem: Continuity of solution to differential equation	651
A.34	Theorem: Bellman-Gronwall	651
A.35	Theorem: Existence of solutions to forced systems	653
A.36	Example: Fourier transform of the normal density.	659
A.37	Definition: Density of a singular normal	662
A.38	Example: Marginal normal density	663
A.39	Example: Nonlinear transformation	666
A.40	Example: Maximum of two random variables	667
A.41	Example: Independent implies uncorrelated	668
A.42	Example: Does uncorrelated imply independent?	669
A.43	Example: Independent and uncorrelated are equivalent for normals	671
A.44	Example: Conditional normal density	674
A.45	Example: More normal conditional densities	675
B.1	Definition: Equilibrium point	694
B.2	Definition: Positive invariant set	694
B.3	Definition: \mathcal{K} , \mathcal{K}_∞ , \mathcal{KL} , and \mathcal{PD} functions	695
B.4	Definition: Local stability	696
B.5	Definition: Global attraction	696
B.6	Definition: Global asymptotic stability	696
B.7	Definition: Various forms of stability	697
B.8	Definition: Global asymptotic stability (KL version)	698
B.9	Proposition: Connection of classical and KL global asymptotic stability	698
B.10	Definition: Various forms of stability (constrained)	699
B.11	Definition: Asymptotic stability (constrained, KL version)	700
B.12	Definition: Lyapunov function (unconstrained and constrained)	700
B.13	Theorem: Lyapunov function and GAS (classical definition)	701
B.14	Lemma: From \mathcal{PD} to \mathcal{K}_∞ function (Jiang and Wang (2002))	702
B.15	Theorem: Lyapunov function and global asymptotic stability (KL definition)	703
B.16	Proposition: Improving convergence (Sontag (1998b))	705

B.17	Theorem: Converse theorem for global asymptotic stability	705
B.18	Theorem: Lyapunov function for asymptotic stability (constrained)	706
B.19	Theorem: Lyapunov function for exponential stability	706
B.20	Lemma: Lyapunov function for linear systems	706
B.21	Definition: Sequential positive invariance	707
B.22	Definition: Asymptotic stability (time-varying, constrained)	707
B.23	Definition: Lyapunov function: time-varying, constrained case	708
B.24	Theorem: Lyapunov theorem for asymptotic stability (time-varying, constrained)	708
B.25	Proposition: Global K function overbound	709
B.26	Definition: Nominal robust global asymptotic stability	710
B.27	Theorem: Nominal robust global asymptotic stability and Lyapunov function	710
B.28	Definition: Positive invariance with disturbances	711
B.29	Definition: Local stability (disturbances)	712
B.30	Definition: Global attraction (disturbances)	712
B.31	Definition: GAS (disturbances)	712
B.32	Definition: Lyapunov function (disturbances)	712
B.33	Theorem: Lyapunov function for global asymptotic stability (disturbances)	713
B.34	Definition: Global control Lyapunov function (CLF)	714
B.35	Definition: Global stabilizability	714
B.36	Definition: Positive invariance (disturbance and control)	715
B.37	Definition: CLF (disturbance and control)	715
B.38	Definition: Positive invariance (constrained)	715
B.39	Definition: CLF (constrained)	715
B.40	Definition: Control invariance (disturbances, constrained)	716
B.41	Definition: CLF (disturbances, constrained)	716
B.42	Definition: Input-to-state stable (ISS)	717
B.43	Definition: ISS-Lyapunov function	718
B.44	Lemma: ISS-Lyapunov function implies ISS	718
B.45	Definition: ISS (constrained)	718
B.46	Definition: ISS-Lyapunov function (constrained)	718
B.47	Lemma: ISS-Lyapunov function implies ISS (constrained)	719
B.48	Definition: Output-to-state stable (OSS)	719
B.49	Definition: OSS-Lyapunov function	719
B.50	Theorem: OSS and OSS-Lyapunov function	720
B.51	Definition: Input/output-to-state stable (IOSS)	720

B.52	Definition: IOSS-Lyapunov function	720
B.53	Theorem: Modified IOSS-Lyapunov function	721
B.54	Conjecture: IOSS and IOSS-Lyapunov function	721
B.55	Definition: Incremental input/output-to-state stable	722
B.56	Definition: Observability	722
B.57	Assumption: Lipschitz continuity of model	723
B.58	Lemma: Lipschitz continuity and state difference bound	723
B.59	Theorem: Observability and convergence of state	723
C.1	Lemma: Principle of optimality	734
C.2	Theorem: Optimal value function and control law from DP	734
C.3	Example: DP applied to linear quadratic regulator	736
C.4	Definition: Tangent vector	739
C.5	Proposition: Tangent vectors are closed cone	739
C.6	Definition: Regular normal	739
C.7	Proposition: Relation of normal and tangent cones	740
C.8	Proposition: Global optimality for convex problems	741
C.9	Proposition: Optimality conditions—normal cone	742
C.10	Proposition: Optimality conditions—tangent cone	743
C.11	Proposition: Representation of tangent and normal cones	743
C.12	Proposition: Optimality conditions—linear inequalities	744
C.13	Corollary: Optimality conditions—linear inequalities	744
C.14	Proposition: Necessary condition for nonconvex problem	746
C.15	Definition: General normal	748
C.16	Definition: General tangent	748
C.17	Proposition: Set of regular tangents is closed convex cone	748
C.18	Definition: Regular set	749
C.19	Proposition: Conditions for regular set	749
C.20	Proposition: Quasiregular set	751
C.21	Proposition: Optimality conditions nonconvex problem	752
C.22	Proposition: Fritz-John necessary conditions	753
C.23	Definition: Outer semicontinuous function	757
C.24	Definition: Inner semicontinuous function	758
C.25	Definition: Continuous function	758
C.26	Theorem: Equivalent conditions for outer and inner semicontinuity	759
C.27	Proposition: Outer semicontinuity and closed graph	759
C.28	Theorem: Minimum theorem	760
C.29	Theorem: Lipschitz continuity of the value function, constant U	761

C.30 Definition: Subgradient of convex function	762
C.31 Theorem: Clarke et al. (1998)	762
C.32 Corollary: A bound on $d(u, U(x'))$ for $u \in U(x)$	763
C.33 Theorem: Continuity of $U(\cdot)$	765
C.34 Theorem: Continuity of the value function	765
C.35 Theorem: Lipschitz continuity of the value function— $U(x)$	766
