List of Examples and Statements

1.1 Definition: Linear space 1
1.2 Definition: Subspace 2
1.3 Definition: Norm 2
1.4 Definition: Inner product 3
1.5 Example: Common transformations do not commute . . . 9
1.6 Example: Matrix identities derived with index notation . . 11
1.7 Theorem: QR decomposition 13
1.8 Theorem: Existence and uniqueness of solutions for square systems 17
1.9 Example: Linearly independent columns, rows of a matrix 21
1.10 Definition: Rank of a matrix 22
1.11 Example: The geometry of least squares 26
1.12 Theorem: Self-adjoint matrix decomposition 38
1.13 Example: A nonsymmetric matrix 41
1.14 Example: A defective matrix 41
1.15 Example: Vibrational modes of a molecule 45
1.16 Theorem: Schur decomposition 48
1.17 Theorem: Symmetric Schur decomposition 49
1.18 Theorem: Real Schur decomposition 49
1.19 Definition: Convex function 59
1.20 Proposition: Full rank of $A^T A$ 83

2.1 Example: Particle motion 110
2.2 Example: A forced first-order differential equation 111
2.3 Example: Sets of coupled first-order differential equations 112
2.4 Example: Power series solution for a constant-coefficient equation 117
2.5 Example: Frobenius solution for Bessel's equation of order zero 119
2.6 Example: Fourier series of a nonperiodic function and the Gibbs phenomenon 127
2.7 Example: Generating trigonometric basis functions 133
2.8 Example: Bessel's equation revisited 134
2.9 Example: Legendre's differential equation and Legendre polynomials 135

2.10 Theorem: Alternative theorem 136
2.11 Example: Steady-state temperature profile with fixed end temperatures 137
2.12 Example: Steady-state temperature profile with insulated ends 138
2.13 Example: Steady-state temperature profile with fixed flux . 140
2.14 Example: Fixed flux revisited 144
2.15 Example: Nonhomogeneous boundary-value problem and the Green's function 145
2.16 Definition: (Lyapunov) Stability 150
2.17 Definition: Attractivity 150
2.18 Definition: Asymptotic stability 150
2.19 Definition: Exponential stability 151
2.20 Definition: Lyapunov function 152
2.21 Theorem: Lyapunov stability 153
2.22 Theorem: Asymptotic stability 154
2.23 Theorem: Exponential stability 155
2.24 Theorem: Lyapunov function for linear systems 158
2.25 Definition: Exponential stability (discrete time) 159
2.26 Definition: Lyapunov function (discrete time) 159
2.27 Theorem: Lyapunov stability (discrete time) 160
2.28 Theorem: Asymptotic stability (discrete time) 160
2.29 Theorem: Exponential stability (discrete time) 160
2.30 Example: Matched asymptotic expansion analysis of the reaction equilibrium assumption 172
2.31 Example: Oscillatory dynamics of a nonlinear system . . . 179
2.32 Theorem: Poincaré-Bendixson 192

3.1 Example: Gradient (del) and Laplacian operators in polar (cylindrical) coordinates 263
3.2 Example: Divergence theorem on the circle 271
3.3 Example: The divergence theorem and conservation laws . 274
3.4 Example: Steady-state temperature distribution in a circular cylinder 280
3.5 Example: Transient diffusion in a slab 282
3.6 Example: Steady-state diffusion in a square domain 284
3.7 Example: Eigenfunction expansion for an inhomogeneous problem 285
3.8 Example: Steady diffusion in a cylinder: eigenfunction expansion and multiple solution approaches 286

3.9 Example: Transient diffusion from a sphere 290
3.10 Example: Temperature field around a sphere in a linear gradient 291
3.11 Example: Domain perturbation: heat conduction around a near-sphere 293
3.12 Example: Derivation of a Fourier transform formula 300
3.13 Example: Transient diffusion in an unbounded domain: one and multiple dimensions 302
3.14 Example: Steady diffusion from a wall with an imposed concentration profile 304
3.15 Example: Reaction and diffusion in a membrane 316
3.16 Example: Solving the wave equation 321

4.1 Example: Characteristic function of the normal density . . 364
4.2 Example: The mean and covariance of the multivariate normal 369
4.3 Example: Characteristic function of the multivariate normal 374
4.4 Example: Marginal normal density 375
4.5 Example: Nonlinear transformation 377
4.6 Example: Maximum of two random variables 378
4.7 Example: Independent implies uncorrelated 380
4.8 Example: Does uncorrelated imply independent? 380
4.9 Example: Independent and uncorrelated are equivalent for normals 382
4.10 Definition: Density of a singular normal 385
4.11 Example: Computing a singular density 386
4.12 Theorem: Normal distributions under linear transformation 387
4.13 Example: Sum of 10 uniformly distributed random variables 390
4.14 Theorem: De Moivre-Laplace central limit theorem 393
4.15 Assumption: Lindeberg conditions 395
4.16 Theorem: Lindeberg-Feller central limit theorem 395
4.17 Theorem: Multivariate CLT—IID 396
4.18 Theorem: Multivariate CLT—Lindeberg-Feller 396
4.19 Example: Conditional normal density 398
4.20 Example: More normal conditional densities 400
4.21 Example: The confidence region, bounding box, and marginal box 406
4.22 Theorem: Mean and variance of samples from a normal . . 418
4.23 Example: Comparing PCR and PLSR 430
4.24 Theorem: Taylor's theorem with bound on remainder . . . 435

5.1 Example: Diffusion on a plane in Cartesian and polar coordinate systems 476
5.2 Example: Average properties from sampling 478
5.3 Example: Transport of many particles suspended in a fluid 483
5.4 Example: Fokker-Planck equations for diffusion on a plane 484
5.5 Algorithm: First reaction method 493
5.6 Algorithm: Gillespie's direct method or SSA 495
5.7 Example: Observability of a chemical reactor 519
5.8 Theorem: Riccati iteration and estimator stability 521
5.9 Definition: Continuity (with probability one) 524
